Although a hypothetical knife-edge valve seat as on cylinder number-1 gives the largest throat area, note that its efficiency is pathetically low at 45 percent. Number-2 is really the first seat that can actually be used, and at best this is 56 percent efficient.

time reduce the cylinder wall and piston wall contact area to a minimum, thus reducing friction losses and excessive wear. The other important functions of piston rings are the control of the lubricating oil, cylinder lubrication, and transmission of heat away from the piston and from the cylinder walls.

**Internal Combustion Engines** Internal combustion engines are devices that generate work using the products of combustion as the working fluid rather than as a heat transfer medium. To produce work, the combustion is carried out in a manner that produces high-pressure combustion products that can be expanded through a turbine or piston.

So how does a hydraulic cylinder fall under these standards? Simple—many safety-related systems require the activation of a hydraulic cylinder to perform a safety-related activity. If the hydraulic cylinder does not perform its function, the safety system may fail. Consequently, hydraulic cylinders are also in the scope of these standards.

cylinder will rotate a few degrees with each operation of the cylinder. Where this is objectionable and where the piston rod cannot be guided externally, A NON-ROTATING CYLINDER should be used. ALLEN AIR TYPES "3R" and "3R#" CYLINDERS are built with two (2) guide rods extending between cylinder heads and thru piston guide rod bearings. This
