Beyond the Theoretical Impasse: Extending the applications

In nature. The lens of the eye is the most obvious example of gradient-index optics in nature. In the human eye, the refractive index of the lens varies from approximately 1.406 in the central layers down to 1.386 in less dense layers of the lens. This allows the eye to image with good resolution and low aberration at both short and long distances. Another example of gradient index optics in ...

Self-Determination Theory (SDT) is a theory of motivation.. It is concerned with supporting our natural or intrinsic tendencies to behave in effective and healthy ways. SDT has been researched and practiced by a network of researchers around the world.. The theory was initially developed by Edward L. Deci and Richard M. Ryan, and has been elaborated and refined by scholars from many countries.

Hofstede's cultural dimensions theory is a framework for cross-cultural communication, developed by Geert Hofstede. It describes the effects of a society's culture on the values of its members, and how these values relate to behavior, using a structure derived from factor analysis.. Hofstede developed his original model as a result of using factor analysis to examine the results of a worldwide ...

American Journal of Physics and Applications (AJPA) provides a forum for the publication of scientific research and review articles. The journal publishes original research papers devoted to wide range of areas of physics and its applications. The topics included in this journal emphasize understanding of the physics underlying modern technology.
