A tourniquet is a constricting or compressing device used to control arterial and venous blood flow to a portion of an extremity for a period of time. Pressure is applied circumferentially around a portion of a limb at a desired location; this pressure is transferred to the walls of blood vessels, causing them to become temporarily occluded or restricted.

Tourniquet - Wikipedia

Definitions. In an effort to provide some standardization of nomenclature, the following definitions are provided: Backup surgeon/surgical attending
