Digital TV Coat Hanger Antenna Rabbit ears are for rabbits, not digital televisions. In this project, we[™] show you how to build your own digital TV antenna from wire hangers, a piece of wood and some pipe.

Digital TV Coat Hanger Antenna - Repeater Builder

In radio engineering, an antenna is the interface between radio waves propagating through space and electric currents moving in metal conductors, used with a transmitter or receiver. In transmission, a radio transmitter supplies an electric current to the antenna's terminals, and the antenna radiates the energy from the current as electromagnetic waves (radio waves).

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Types. A passive phased array or passive electronically scanned array (PESA) is a phased array in which the antenna elements are connected to a single transmitter and/or receiver, as shown in the animation at top. PESAs are the most common type of phased array. An active phased array or active electronically scanned array (AESA) is a phased array in which each antenna element has its own ...
